

Overview

Pollify is a decentralized polling and governance platform built on the TRON blockchain, leveraging multiple tokens to enable secure, transparent, and community-driven engagement. The platform is powered by three core tokens.

PollCoin (POL) - Governance & Staking

- Total Supply: 77,777,777 POL, ensuring a controlled and sustainable supply.
- Purpose: PollCoin serves as the governance token of the Pollify ecosystem.
- Staking Mechanism: Users stake PollCoin to participate in governance decisions, ensuring a decentralized voting structure.
- Poll Participation: Users can spend PollCoin to create or vote on polls.
- Rewards: Users who stake their PollCoin receive incentives based on staking duration.
- Governance Power: PollCoin holders influence decision-making on platform upgrades, tokenomic adjustments, and community rules. Future governance mechanisms may introduce binding votes for major decisions.

Cosmoflux (CSX) - Content Creation Energy

- Purpose: Cosmoflux acts as the energy source required for content creation on the platform.
- Auto-Burn Mechanism: When users generate media content (videos, images, polls), a predefined amount of CSX is automatically burned. The burn amount is dynamically determined based on the complexity and size of the content being created.
- Fixed Supply: The total supply is 1,000,000,000 CSX, ensuring scarcity and long-term sustainability.
- Scheduled Burn: Future financial milestones may introduce scheduled burns to further manage supply.

Gratium (GRTM) - Community Engagement & Tipping

- Purpose: Gratium serves as the primary token for tipping, engagement rewards, and incentivizing quality content.
- Digital Fortune Cookie Concept: Users can attach messages, rewards, NFTs, or even PollCoins inside a Gratium transaction. These are only revealed when the recipient claims them.
- PollCoin Attachment: Users can include PollCoins within Gratium, allowing for flexible reward structures. To prevent abuse, a limit may be introduced on the number of PollCoins that can be attached per Gratium transaction.
- Fixed Supply: The total supply is 1,000,000,000 GRTM, with mechanisms to prevent overuse.

Conclusion

Pollify's multi-token system ensures a balanced and decentralized ecosystem where governance, content creation, and community engagement all have their unique economic models. With PollCoin managing governance, Cosmoflux fueling content creation, and Gratium driving user engagement, the Pollify ecosystem is designed for long-term scalability and impact.
